EDUCATION

KAIST, South Korea

Aug 2020 - Feb 2025 (Expected)

Degree: Bachelor of Science (8th Semester)

Major: Computer Science, **Minor:** Electrical Engineering

WORK EXPERIENCE

AI Engineer Intern, MolpaxBio

Dec 2023 - Mar 2024

Working with my mentor, I collaboratively developed a deep learning pipeline for multi-instance classification using whole slide images for binary-cancer prognosis and multi-staging cancer classification tasks. I contributed to on-alcoholic steatohepatitis (NASH) detection project, identifying cellular components in liver tissue slides and assessing tissue health. I also developed a fast-patching mechanism with efficient annotation scaling and applied YOLOv8 for segmentation of tall cells in thyroid tissue slides for qualitative analysis by pathologists.

Individual Study, INA Lab

Oct 2023 - Dec 2023

Developed the pre-processing and post-processing code of the paper 'AutoAD: Movie Description in Context', in conjunction with the model provided in the paper code to dynamically create audio descriptions.

PROJECTS

[Progressive Self-Knowledge Distillation with Mutual Learning](#)

Spring '23

Improved image classification on CIFAR-100 by integrating self-knowledge distillation with collaborative learning, achieving higher accuracy at reduced computational expense.

[DINO-Matching 3D Gaussian Splatting \(Paper\)](#)

Fall '23

Enhanced small object rendering and reduced artifacts by emphasizing scene reconstruction and viewpoint consistency in DINO-feature space.

[OECT: Optimized-Embedded Cluster & Tune \(Paper\)](#)

Fall '23

Enhanced LLM performance in classification task using a embedding-clustering algorithm.

SKILLS

Python, PyTorch, Apache Spark, MySQL, C, Java, Figma

COURSEWORK

CS570:Artificial Intelligence and Machine Learning — CS576:Computer Vision— CS470:Introduction to Artificial Intelligence— CS361: Introduction to Data Science — CS479: Machine Learning for 3D data, CS475 — Machine Learning for Natural Language Processing
